PROFESSIONAL EXPERIENCE

Ferguson

Remote

Lead Software Engineer

March 2026 - Current

- Led a five-person Scrum team on solution architecture and code quality; reviewed 125+ pull requests and established code standards that reduced post-deployment hotfixes from routine occurrence to one anomaly since joining the team.
- Served as primary technical liaison to product managers, translating requirements into technical specifications and proactively communicating timeline impacts so product could set accurate business expectations.
- Designed and built a high-volume data processing solution using Salesforce's queueable async APEX to overcome governor limits encountered when Flow and synchronous APEX processed hierarchies of 100,000+ records with concurrent 3rd party API callouts; eliminating performance constraints.
- Leveraged Claude for architecture, design decisions, and code scaffolding while continuing to deliver ~10 story points per sprint as an individual contributor; reduced design review cycles by accelerating initial solution validation.
- Resolved two major incidents within 12 hours of identification, minimizing system downtime and ensuring platform stability.

Senior Software Engineer

September 2024 - March 2026

- Designed and delivered dozens of scalable Salesforce solutions spanning APEX (async/sync), Lightning Web Components (LWC) and REST/SOAP integrations to support customer service and customer-facing workflows.
- Completed 150+ full-stack user stories across 50+ sprints, owning design, development, testing, and deployments for a B2B E-Commerce Experience Cloud platform serving 100,000+ users.
- Built a governor-limit-compliant, programmatic user provisioning solution using the [Trigger Action Framework](#), improving permission-set accuracy by ~95% and delivering >90% Apex test coverage across all classes - directly managing profile and field-level security configurations for sensitive data.
- Implemented an analytics solution using Google Tag Manager to track interactions across the registration flow, enabling the business to analyze registration abandonment rates and refine onboarding patterns based on actual user behavior; insights showed a 64% increase in conversion rates.
- Created and maintained a modular LWC component library (10+ components) adopted across 3 feature teams, standardizing UI/UX and reducing component build time for common patterns.
- Identified critical edge cases in DevOps pipeline improvements (CoPilot-assisted PR reviews, automated UAT deployments, automated release generation); provided technical guidance ensuring alignment with Ferguson's development workflow.

Deloitte Consulting

Rosslyn, VA

Salesforce Developer & Front-End Developer

June 2023 - August 2024

- Led front-end development for a Salesforce-based employee onboarding platform serving 300+ users at a federal agency; managed role-based access, identity provisioning, and case workflows in collaboration with HR stakeholders.
- Designed and built scalable, modular Lightning Web Components using SLDS and custom CSS; integrated front-end/backend services using Apex, SOQL, and Salesforce REST APIs for responsive data interactions.

Consultant and Salesforce Developer

July 2019 - June 2023

- Designed and owned an Experience Cloud community portal serving 4,000+ healthcare agencies for grant distribution and PPE allocation, implementing sharing sets, sharing rules, and record-visibility controls to enforce org-based data separation; built self-service registration with multi-level approval workflows and document submission capabilities.

- Developed Salesforce Flows and dynamic LWCs to support rapid ad-hoc data intake tools, enabling government agency leadership to gather data without requiring full development cycles.

CERTIFICATIONS & SKILLS

Salesforce Certifications: Platform Developer I, Platform Administrator, Platform Administrator II, Platform App Builder, Service Cloud Consultant

Technical Skills:

- **Languages/Frameworks:** APEX Classes/Triggers, Lightning Web Components (LWC), JavaScript, HTML/CSS, SOQL, SOSL, SQL, Java, TypeScript, jQuery, REACT
- **Salesforce:** Experience Cloud, Flows, Apex, Lightning, Aura, Process Builder, Security & Sharing Model, User Management, Roles/Profiles, Validation Rules, other declarative tools.
- **DevOps Tools:** Git, Github, VSCode, Bitbucket, Jenkins, Salesforce SFDX, Salesforce CLI, Changesets
- **Web APIs:** REST, SOAP, JSON, XML
- **Cloud/Other:** Salesforce Clouds, JIRA, Confluence, Figma

EDUCATION

JAMES MADISON UNIVERSITY

Harrisonburg, VA

Bachelor of Business Administration, Major in Computer Information Systems, Concentration in European Studies
